

Task 4 – To do list

1. The week 4 task is to create a to do list and also to save the changes that we have done.
2. So I have made use of HTML, CSS and JavaScript to complete this task.
3. I have created a to-do list where you can enter your tasks that you want to add and you can mark it as completed and you can also delete them if you no longer want the task to be visible.
4. I have made use of CSS to make the website more appealing.
5. I have made use of the HTML for the structure of the program.
6. I have implemented Javascript to store the tasks that the user is entering.
